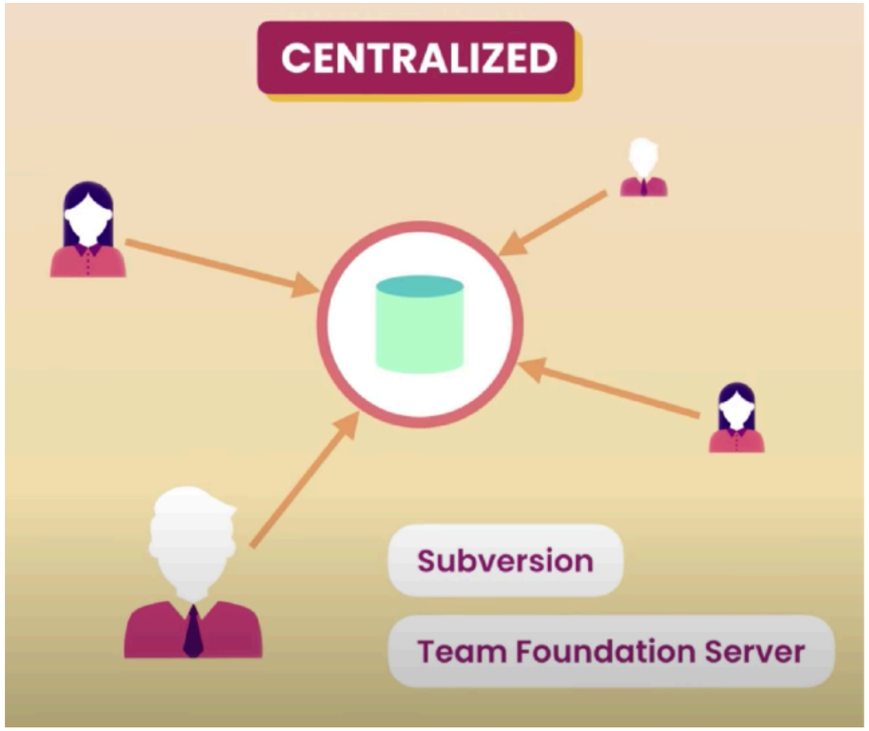
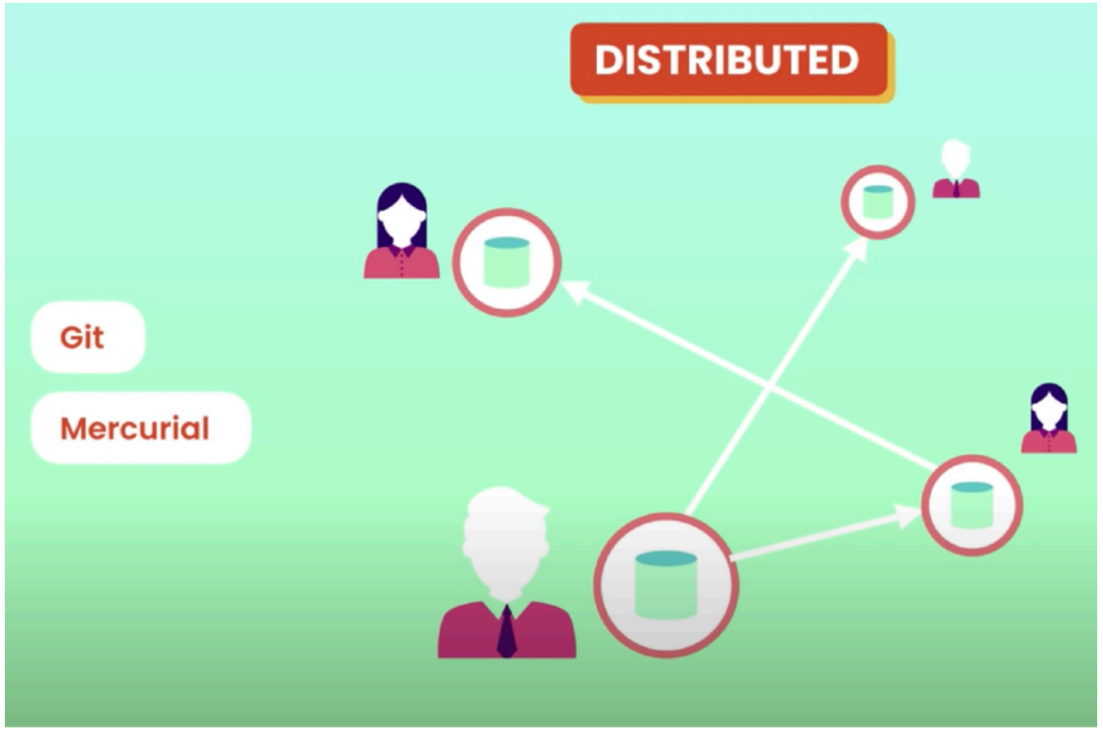
TWO DIFFERENT VERSION CONTROL SYSTEMS



VS



OTHER VERSION CONTROL SYSTEMS AKA CLIENTS & HOSTS

Clients are applications to visualize all those commands. We will use GitHub Desktop or simply the command line.

Hosts are places to store all those commands, i.e. your code. We will use GitHub.com

Client and host don't have to be the same, they can differ!

- GitLab
- Gogs
- BitBucket
- GitBucket
- SourceForge
- Beanstalk
- Fabricator...

Just. So. Many.
