

# THE BASICS

1. Add
2. Commit
3. Pull
4. Push
5. Clone

- 
6. Branching
  7. Merging
  8. Fork

Not so basic

# 1. ADD

- ADD a particular set of files and/or changes to your local repo
- Type: `git add [files to add]` or `git add .`
- Boom. You've added files and changes to your repo! This is also called the staging area!
