

MERGE CONFLICTS

- Oh no! Two people changed the same thing! How do you fix it?
- You can resolve manually or use merge tools

The screenshot displays a GitHub pull request interface with a sidebar on the left containing a merge icon. The main content area features four distinct status messages:

- Changes approved**: Indicated by a green checkmark icon. It states "2 approved reviews. [Learn more.](#)" and includes a "Show all reviewers" link in the top right.
- All checks have failed**: Indicated by a red 'x' icon. It states "1 failing check" and includes a "Hide all checks" link in the top right.
- ci/circleci — Your tests failed on CircleCI**: Indicated by a red 'x' icon and the CircleCI logo. It includes a "Details" link in the top right.
- This branch has conflicts that must be resolved**: Indicated by a warning triangle icon. It states "Only those with [write access](#) to this repository can merge pull requests."

Below the conflict message, a section titled "Conflicting files" lists the files in conflict:

- Changelog.md
- Demo/Tests/EndpointSpec.swift

RESOLVE BY HAND

- Things on top are yours, things on bottom are theirs.
- Delete what you don't want to keep.
