

3. PUSH

- PUSH the local commits you made to the remote server
- Type:
`git push origin master`
- Boom. Now you updated the remote repo with your latest local version

4. PULL

- **PULL** any new commits that the remote server may have down to your local repo
- Always pull before pushing your own commits!
- Type:
git pull
- Boom. Now you have the latest remote version of a repo on your local machine!
