

# THE BASICS

1. Add
2. Commit
3. Pull
4. Push
5. Clone

6. Branching
7. Merging
8. Fork

Not so basic

# 1. ADD

- ADD a particular set of files and/or changes to your local repo
- Type:  
`git add [files to add] or  
git add .`
- Boom. You've added files and changes to your repo! This is also called the staging area!
