

# TWO DIFFERENT VERSION CONTROL SYSTEMS

VS

# OTHER VERSION CONTROL SYSTEMS AKA CLIENTS & HOSTS

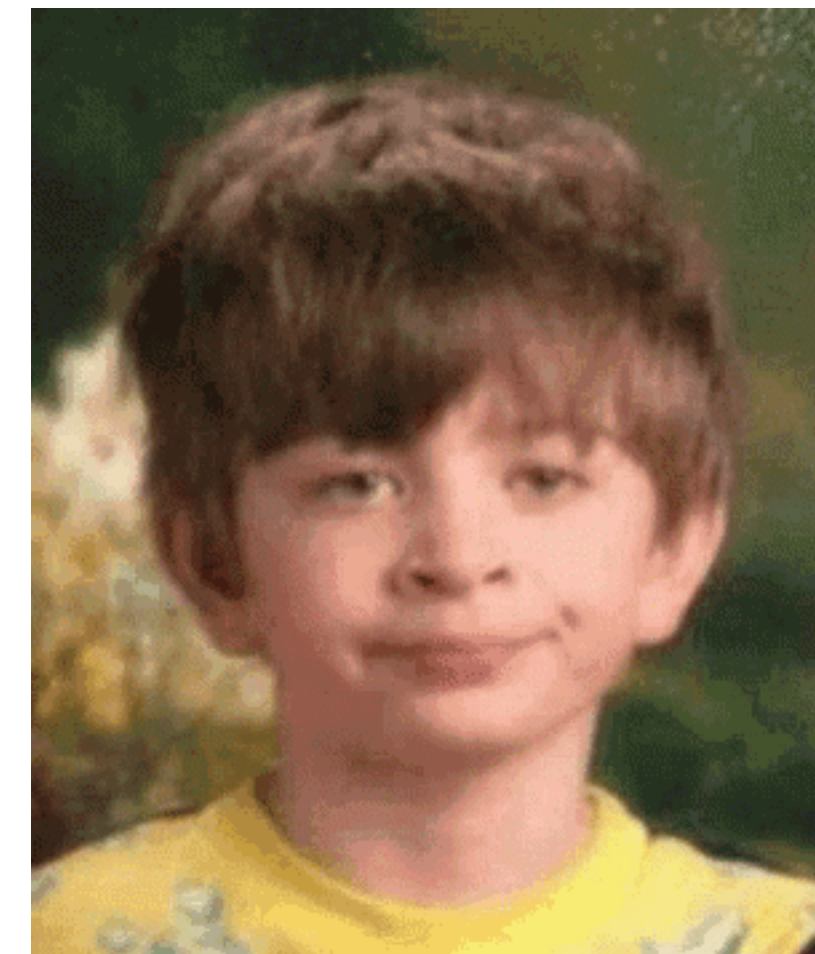

Clients are applications to visualize all those commands. We will use GitHub Desktop or simply the command line.

Hosts are places to store all those commands, i.e. your code. We will use [GitHub.com](https://github.com)

Client and host don't have to be the same, they can differ!

- GitLab
- Gogs
- BitBucket
- GitBucket
- SourceForge
- Beanstalk
- Fabricator...

Just. So. Many.
