5. CLONE
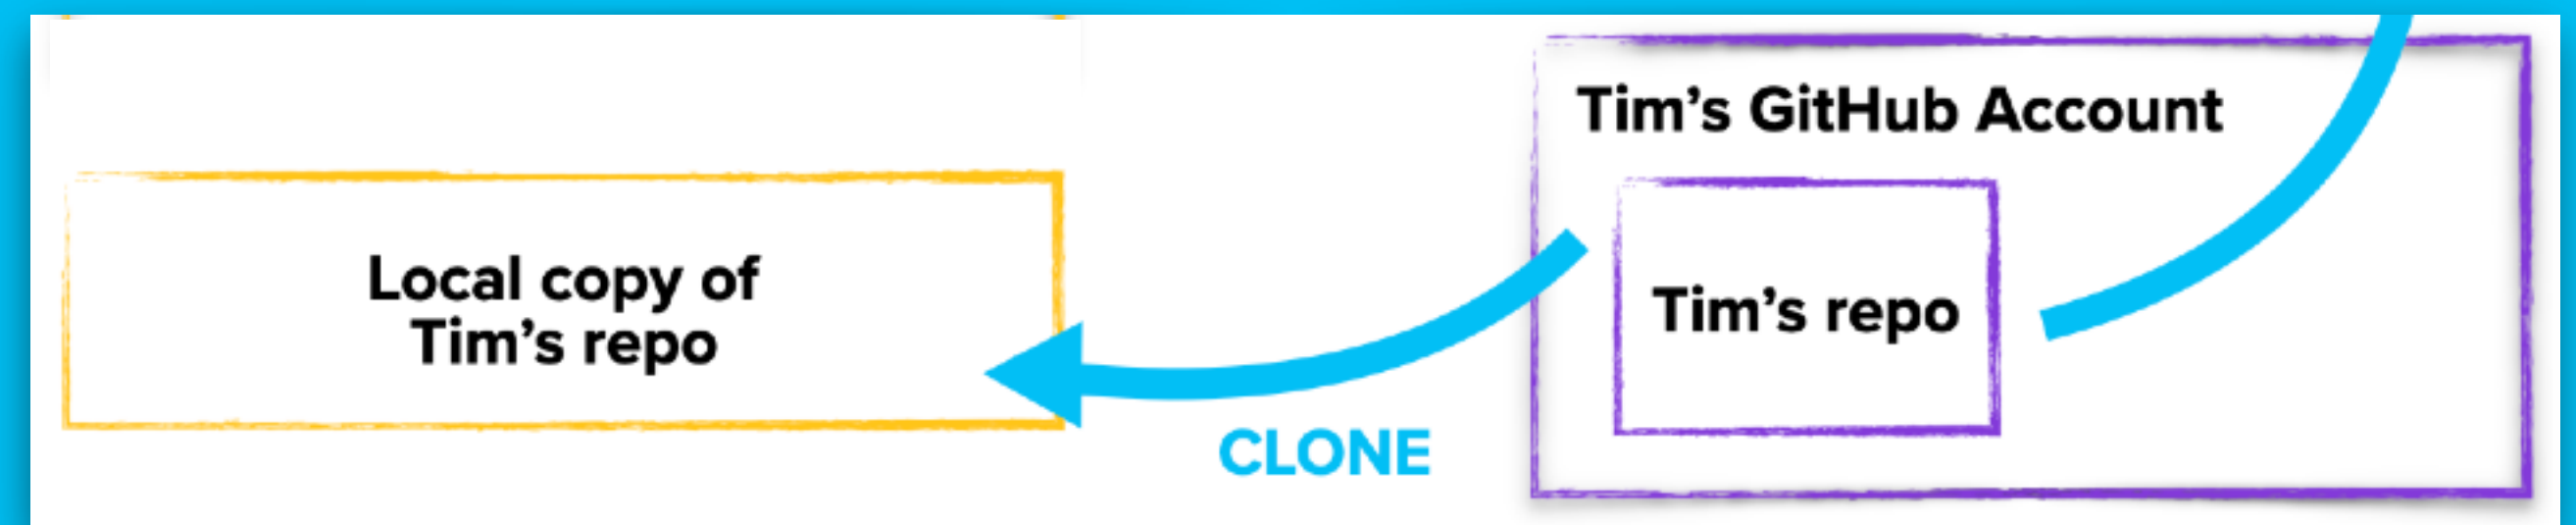

- **Download a LOCAL copy of a git repo from a REMOTE server aka another user, including all history.**

- **In Terminal, cd into path where you want to clone the project**

- **Type:**
  git clone https://github.com/ CyanLetter/WebDev3_Spring2018

- **Boom. Now you have a local copy of a remote Git repo!**

6. BRANCHING

- "Making an alternate timeline"

- Good practice for a plugin or new page

- The master branch should never be broken, branches let you work without breaking master

- Great for working in teams, still helpful if it's just you

- Make sure to stay in sync with mbranch via **git pull**

- **List all current branches:**
  git branch -av

- **Create a branch:**
  git branch "branch name"

- **Switch to a branch:**
  git checkout "branch name"

- **Delete a branch:**
  git branch -d "branch name"
