THE BASICS

1. Add
2. Commit
3. Pull
4. Push
5. Clone
6. Branching
7. Merging
8. Fork

Not so basic

1. ADD

- **ADD** a particular set of files and/or changes to your local repo

- Type:
  git add [files to add] or
  git add .

- Boom. You've added files and changes to your repo! This is also called the <u>staging area</u>!
