# 3. PUSH

- **PUSH the local commits you made to the remote server**

- **Type:**
  git push origin master

- **Boom. Now you updated the remote repo with your latest local version**

4. PULL

- **PULL any new commits that the remote server may have down to your local repo**

- **Always pull before pushing your own commits!**

- **Type:**
  git pull

- **Boom. Now you have the latest remote version of a repo on your local machine!**
